Worksheet #3 S1E7 Part 3:

"Using AI for Language Learning and Translation"

Objective: Students will use AI tools to translate text, practice conversational skills, and improve their understanding of language structures. They will refine AI-generated translations based on their own knowledge and understanding of the language.

Part 3: Practicing Conversational Skills with AI

1. Use an AI tool (such as ChatGPT or a language-specific app like Duolingo) to practice a short conversation in your target language. You can start with a simple prompt like:
   - "Hello! How are you today?"
   - "What do you like to do in your free time?"
2. Engage in a conversation with the AI, responding to its prompts and asking follow-up questions. Try to keep the conversation going for at least 5 exchanges.

Task:

- Write down parts of the conversation that were difficult or unfamiliar to you. Use the AI to help you understand new vocabulary or phrases.

Reflection:

- What new words or phrases did you learn from the conversation?
- How comfortable did you feel speaking with the AI? How might this practice help you in real-life conversations?

Teacher's Notes:

- Encourage students to focus on language nuances and the context of translations when working with AI tools.
- Discuss the limitations of AI in capturing cultural differences and idiomatic expressions.
- Highlight the importance of using AI as a supplement to, not a replacement for, active language learning.
